Top Issues

High	Avoid enormous network payloads LCP	Total size was 10.7MB
Med-High	Reduce JavaScript execution time TBT	5.1s spent executing JavaScript
Med-High	Eliminate render-blocking resources LCP	Potential savings of 649ms
Med-Low	Use a Content Delivery Network (CDN)	37 resources found
Med-Low	Use HTTP/2 for all resources	Potential savings of 1.3s

Focus on these audits first

These audits likely have the largest impact on your page performance.

Structure audits do not directly affect your Performance Score, but improving the audits seen here can help as a starting point for overall performance gains.

How does this affect me?

Modern web users have a short attention span and expect a fast and seamless website experience. Delivering that fast experience can result in more traffic, more conversions, and more happiness.

As if you didn't need more incentive, **Google use Page Speed and Page Experience (including Web Vitals) signals in their ranking algorithm.**

About GTmetrix

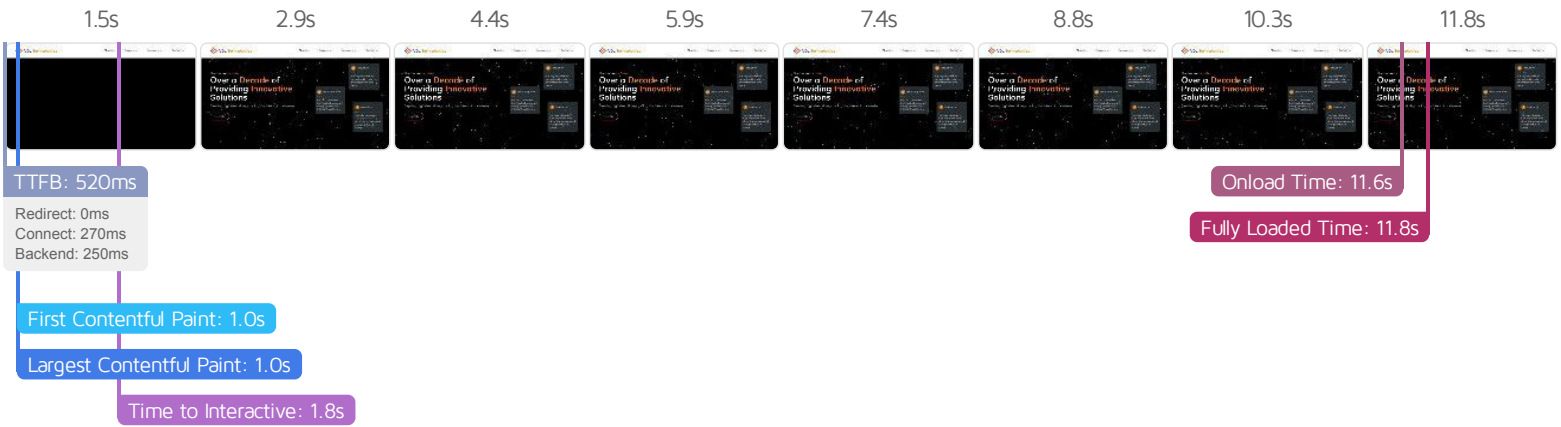

**GTmetrix** was developed as a tool for customers to easily test the performance of their webpages.

The waterfall chart displays the loading behaviour of your site in your selected browser. It can be used to discover simple issues such as 404's or more complex issues such as external resources blocking page rendering.
